

16 Channel Datalogger

This Datalogger is a small portable, multipurpose digital and analogue converter/controller that collects data on a flash card.

The data logger can be linked to any digital or analogue interface and can process a variety of measurements.

Processed data can be uploaded to a PC or laptop by using a serial connection or via the flash disk. Raw data can be uploaded from within a specially designed application.

Features

- Measures temperature, volume, pressure, velocity, position, heave-sway, tilt and pitch and roll
- Handles processed or raw data
- Programmable Calibration
- Low power consumption
