

## **Multi Channel Analogue Output Board**

A multi purpose Analogue Output card which plugs into the top of our C167 processor board. This card has eight standard 4-20ma outputs which can be changed to 0-20msa if required. It also contains eight 0-10volt outputs all connected through a 30 pin idc connector.

The card also has two CAN bus transceivers. It can be supplied with any combination of outputs to conserve power requirements .

### **Features**

- Plugs into CPU Datalogger board
- Eight 0-10 volt output channels
- Eight 4-20 ma output channels
- Two CAN transceivers
- Any combination of outputs available
